### Astronomy-Universe-Galaxy: Matching

Use the following words:

- |                      |                                                          |
|----------------------|----------------------------------------------------------|
| _____ universe       | 1) young hot star                                        |
| _____ galaxies       | 2) group of planets orbiting a star                      |
| _____ Milky Way      | 3) name of our galaxy                                    |
| _____ solar system   | 4) galaxy with arms coming from the center like pinwheel |
| _____ yellow         | 5) middle-aged star-our sun                              |
| _____ blue           | 6) flat round or oval galaxy                             |
| _____ red            | 7) a dying star that explodes                            |
| _____ elliptical     | 8) 300,000,000 m/s                                       |
| _____ spiral         | 9) galaxy with no regular shape                          |
| _____ irregular      | 10) groups of stars                                      |
| _____ supernova      | 11) old cooler star                                      |
| _____ speed of light | 12) the stars, galaxies, dust and everything in space    |
